

ECO-FRIENDLY

Packaging Solutions

Sustainable, reusable and recyclable packaging.

ECO-FRIENDLY PACKAGING

Meaningful action in favour of sustainable development.

The provision of service to customers, while respecting the environment, has been our overall goal for more than 15 years. We are eager to generate benefits for our customers and to nature.

This has been possible thanks to interaction with our partners, our experience, and acquired knowledge from research and development. All of these efforts have resulted in new and sustainable solutions.

We built the company vision around the “triple bottom line” of profit, people, and planet. Related values include corporate social responsibility and social innovation, which involve using business as a way to advance social and environmental change.

This provides a threefold benefit. As an example, our flax wedges contribute to a clean environment by supporting the green revolution with a 100% natural product line. Thanks to this product, more than 60 disabled people are progressing towards working in a permanent job, as the production is being handled by a vocational rehabilitation centre.

In addition to our sustainable packaging solutions and process skills, we promote customer proximity, growth, and momentum. Strong business relationships provide guidance to solutions that generate benefits for the customer.

In regard to these topics, we would like to introduce you to the many activities of our group of companies.

We hope you find this reading stimulating and informative.

Yours,

Joe MUJKIC

Executive Director Of Operations

MOVING FORWARD

Concentrating on sustainable packaging makes it possible to exploit this opportunity and offer tailor-made solutions.

Improving competitiveness with high-quality products is among the central elements of our business policy. Swift and controlled realization of newly developed sustainable, reusable, recyclable packaging, and economical serial production free of defects are the criteria against which we measure ourselves.

Developing packaging that is sustainable requires consistent capital investment in state-of-the-art machinery and equipment. In addition, and above all, we are committed to continuously educating our employees and partners in order to maintain their knowledge and skills at the highest level.

ECO CONCEPTION

Meaningful action in favour of sustainable development

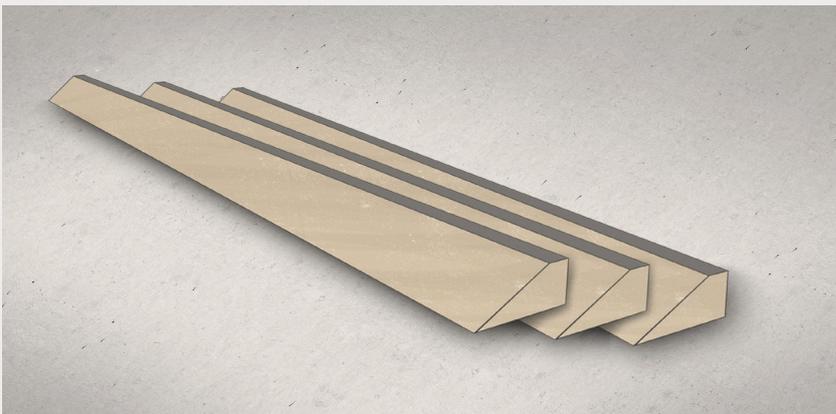

Our self-locking wedge used to secure paper rolls during transport is made of natural flax, which is light and strong, reusable, and recyclable.

In cooperation with our customers and flax board producer, we have developed and designed a flax wedge that is nearly 100% recyclable, in order to replace polystyrene wedges that were used before.

The serial production was launched in 2011. In the meantime, some 5.000.000 wedges have been delivered. This corresponds to approximately 30 000m³ or 1800 tons of polystyrene. In other words, polystyrene in the amount of 1800 000 kg is not polluting our planet.

This provides a threefold benefit:

- The flax wedges are **economically viable**.
- They contribute to a **clean environment** by **supporting the green revolution** with a **100% natural product line**.
- **60 disabled people** are progressing towards working in a **permanent job**, as the production is being handled by a vocational rehabilitation centre.

A FOCUS ON SUSTAINABILITY

We believe very strongly in the conservation of our environment, its resources and the recycling of as much product as possible. We believe in living the practice of: “reduce”, “reuse”, “recover” and “recycle”. These four practices are the pillars of our commitment to a better environment and social responsibility.

Wherever possible we endeavour to provide environmentally friendly solutions to our customers, whether these are in the form of using recycled content in our packaging design, biodegradable voidfill, plastics alternatives and formulas and/or an effort to reduce the amount of packaging materials a customer requires. We focus on the total life cycle of a product and recognise that protecting the environment is the responsibility of us all.

PACKAGING

Standard and custom-made

Our experienced team does it every day, hand in hand with our customers, our production experts, and our manufacturing partners. It's a chain of collaboration to develop ecological, cost-efficient, and sustainable smart packaging.

In offering a wide range of standardized and customized packaging to our perfectly satisfied customers, our solutions and services are performed in accordance with all safety standards. We serve you in seven languages, including English, German, French, Luxembourgish, and Italian, as a recognized, worldwide partner for smart, efficient, and complete packaging solutions. Our highly motivated and energetic team is continually improving our system to ensure flawless on-time delivery in a pleasant and convenient way. For every customer, we offer a well-trained partner, helping you to fulfil your special needs, orders, and requests just in time!

We are the best choice for many leading industrial partners, to whom we offer:

- ➔ Experience in packaging cost analysis
- ➔ Appropriate cost-savings solutions and strategies
- ➔ Reusability or recyclability of the packaging solutions

LOGISTICS PACKAGING

LOGISTICS SERVICES

- Reception/control
- Storage
- Order preparation
(picking by unit, parcel or pallet)
- Inventory management
- Returns processing
- Online tracking of stock, movements, and orders

ADDITIONAL SERVICES

- Delivery from point to point
(national and international)
- Customized packaging and co-packing
- Customization of products and packaging
- Routing
- Waste valorization, Paper and wood
